Q19. A customer reports an incident where the SAP Commerce system crashes in production. The customer provides the following

log:

What would you advise the customer to do to avoid this happening again?

- * Configure the auto reconnect property in the JDBC properties to reconnect to the database automatically.
- * Modify the FlexibleSearch query that fetches catalogs to fix the syntax errors.
- * Increase the number of connections in the pool if the current number is NOT sufficient.
- * Fix the missing links between related items in the catalog.

Q20. A customer reports a performance problem with DefaultStockService. After checking the customer's system by running `SELECT COUNT(*) FROM {StockLevelHistoryEntry}`, you discover that there are hundreds of millions of instances of StockLevelHistoryEntry. What would you do to resolve this performance issue? Note: There are 2 correct answers to this question.

- * Delete the content of the StockLevelHistoryEntry table directly from the database to immediately improve performance.
- * Implement a CronJob that will clean the StockLevelHistoryEntry table according to customer business needs.
- * Suggest an improvement by creating a maintenance request for the customer.
- * Run Cleanup Type System in the SAP Commerce Administration Console.

Q21. What should you do before you report incorrect software behavior to SAP (third-level support)? Note: There are 2 correct answers to this question.

- * Test the issue on the customer's SAP Commerce installation.
- * Document the complete technical environment information of the system where the incident occurred to provide to SAP.
- * Reproduce and validate the problem on the standard out-of-the-box SAP Commerce.
- * Tell the customer that the reported problem will be fixed in a future patch release.

Q22. When you troubleshoot a catalog synchronization issue, which files do you check first? Note: There are 3 correct answers to this question.

- * Sync Media dump files
- * Database dump files
- * localextensions.xml file
- * JDBC log files
- * local.properties file

Q23. How does SAP Commerce use the LDAP protocol? Note: There are 2 correct answers to this question.

- * SAP Commerce converts LDAP query results to ImpEx.
- * SAP Commerce imports user and group data from an external LDAP system.
- * SAP Commerce can use the DSML protocol within LDAP.
- * SAP Commerce writes actions to the connected LDAP system.

Q24. You enable the automatic reset in the Backoffice Framework configuration. When is the reset triggered? Note: There are 2 correct answers to this question.

- * After the next compilation
- * After you logout
- * On the next server startup
- * After you login again

Q25. What is a Restriction?

- * The WHERE clause of a FlexibleSearch statement
- * A limitation of the types and attributes a user can see or edit in the Backoffice Administration Cockpit
- * A way to assign access rights to users and user groups
- * A fragment of the WHERE clause of a FlexibleSearch statement

Q26. What must you configure when you use the iFlow?Note: There are 2 correct answers to this question.

- * Set iFlow authentication type to certificate-based.
- * Set the receiver address setting and proxy type setting of the iFlow.
- * Assign the AuthGroup.IntegrationDeveloper role to the SAP Commerce user.
- * Assign the AuthGroup.IntegrationDeveloper role to the SAP Cloud Integration tenant.

Q27. SAP Commerce receives a Java OOM (out of memory) exception.What should you do first?Note: There are 2 correct answers to this question.

- * Analyze the gc.log file for object allocation.
- * Take a Java heap dump when the issue is detected.
- * Analyze the access.log file for frequent requests.
- * Increase the memory size.

Q28. Which properties can you set to use Service Layer Direct?Note: There are 2 correct answers to this question.

- * Set persistence.legacy.mode to False in core-spring.xml.
- * Set the sld.enabled modifier to True in the ImpEx file.
- * Set persistence.legacy.mode to False in the local.properties.
- * Set persistence.legacy.mode and servicelayer.prefetch to False All in the local.properties.

Q29. Which actions do you perform to use the EDMX schema?Note: There are 3 correct answers to this question.

- * Use the <Association> … </Association> tag as a representation of the relationship between entity types.
- * Use ComplexType and EdmSimpleType as part of the <Association> … </Association> tag.
- * Define the structure of the payload that the Integration API will support for both inbound and outbound requests.
- * Update the EDMX schema by downloading it, changing it, and re-uploading it within the SAP Commerce Backoffice.
- * Use odata2webservices to get the EDMX schema for the integration object.

Q30. What happens when you set the impex.legacy.mode property to True?Note: There are 2 correct answers to this question.

- * The ServiceLayer interceptors and validators are triggered during the import/export process.
- * The INSERT, UPDATE, and REMOVE operations are performed by the ModelService during the import.
- * The ServiceLayer interceptors and validators are NOT triggered during the import/export process.
- * The INSERT, UPDATE, and REMOVE operations are NOT performed by the ModelService during the import.

Q31. Where can you check the SAP Commerce platform version?Note: There are 2 correct answers to this question.

- * In the bin/platform/build.number file.
- * In the bin/platform/project.properties file.
- * In the Administration Console.
- * In the command line by running the ant-version.

Q32. How are bug fixes provided to partners and customers?

- * SAP Commerce delivers small jar archives called Hot Fix for the extension that fixes a specific bug.
- * SAP Commerce provides an extension that contains bug fixes.
- * SAP Commerce provides SAP Notes with code corrections describing the best way to fix a specific bug.
- * SAP Commerce provides a patch release that contains only bug fixes and security patches.

Q33. How do you configure SAP Commerce cluster settings?Note: There are 2 correct answers to this question.

- * Specify exactly the same cluster settings for each node in the

%HYBRIS_BIN%/config/local.properties file.

- * Specify the cluster settings in the %HYBRIS_BIN%/config/local.properties file for each cluster node.
- * Set the cluster.node.autodiscovery to True in order to enable cluster ID autodiscovery.

* Specify the cluster settings of each cluster node in the

%HYBRIS_BIN%/config/tomcat/conf/server.xml file.
