

VMware Certification 5V0-35.21 Dumps Full Questions with Free PDF Questions to Pass [Q40-Q62]

VMware Certification 5V0-35.21 Dumps Full Questions with Free PDF Questions to Pass
100% Updated VMware 5V0-35.21 Enterprise PDF Dumps

Professionals who hold the VMware 5V0-35.21 certification demonstrate their expertise in deploying and managing vRealize Operations environments. They have a deep understanding of the vRealize Operations architecture and can use it to optimize resource utilization and improve the overall performance of IT infrastructure. VMware vRealize Operations Specialist certification is ideal for IT professionals who are responsible for managing VMware environments and want to enhance their skills in vRealize Operations. It is also suitable for individuals who want to pursue a career in virtualization and cloud computing.

QUESTION 40

An administrator is using the troubleshooting workbench in vRealize Operations for troubleshooting purposes.

Which other vRealize Suite product's data will be shown in this view when the integration is configured?

- * vRealize Log Insight

- * vRealize Network Insight
- * vRealize Automation
- * vRealize AI Cloud

QUESTION 41

What is the purpose of the self-provider option within the dashboard definition?

- * If Refresh Content is enabled, it will specify how often to refresh the data in the widget display.
- * It can create a custom set of metrics to support widgets with meaningful data.
- * It enables or disables the automatic refreshing of the data in the widget display.
- * It indicates whether objects appearing in the widget are defined in the widget or are provided by another widget source.

QUESTION 42

What is used to monitor third-party solutions from vRealize Operations?

- * Inventory
- * Management packs
- * Authentication sources
- * Super metrics

QUESTION 43

Due to multiple hardware failures, several virtual machines were corrupted and are being restored from a recent backup. One of the corrupted virtual machines was the primary replica node of a large production vRealize Operations Manager cluster.

How should the system administrator resolve this availability issue within vRealize Operations Manager?

- * Remove the corrupted node, and then disable and re-enable vRealize Operations Manager High Availability to reassign the primary replica role to another existing node in the cluster.
- * Deploy a new vRealize Operations Manager node, and then add it to the existing cluster.
- * Clone an existing primary vRealize Operations Manager node, and then add it into the vRealize Operations Manager cluster.
- * Ask the backup administrator to restore the corrupted primary replica node, and then refresh the nodes from the vRealize Operations Manager administrator interface.

QUESTION 44

During an upgrade of the vRealize Operations cluster via the Administration UI, the cluster has failed, and the status has changed to offline.

Which remediation strategy should be used to manage this problem and continue the installation process?

- * Manually take the cluster offline, and then select Rollback Installation.
- * Manually bring the cluster online, and then select Rollback Installation.
- * Manually take the cluster offline, and then select Finish Installation.
- * Manually bring the cluster online, and then select Finish Installation.

QUESTION 45

A company has just acquired a competitor with a vSphere environment and would like to have the new vSphere environment also monitored by the company's original three-node vRealize Operations cluster. The vRealize Operations Sizing tool determines two additional data node, and a remote collector needs to be added to the vRealize Operations cluster.

The nodes are deployed accordingly, and the administrator now needs to create a trust relationship between the cluster and each of these new nodes.

Which two methods will meet this goal? (Choose two.)

- * Generate passphrases in the administration User Interface of an existing node, and enter them when prompted in each new node.
- * Click the Add New Nodes button on the Cluster Management page in the product User Interface of an existing node.
- * Use any local or directory user with the Administrator role in vRealize Operations when prompted in each new node.
- * Click the Add New Nodes button on the System Status page in the administration User Interface of an existing node.
- * Use the vRealize Operations root user name and password when prompted in each new node.

QUESTION 46

An administrator created a pricing card for a new environment. After the pricing card was created and attached, the administrator immediately checked the cost dashboard but only sees zero prices for the VMs in the new environment.

What is the reason for this behavior?

- * The prices are only available for ESXi hosts.
- * A cost-based pricing card was created.
- * The cost calculation has not run yet.
- * The pricing card was not attached to the VM resource.

QUESTION 47

Which cloud provider needs to be added as a custom cloud provider when running a What-If Analysis?

- * IBM Cloud
- * Google Cloud
- * Microsoft Azure
- * Oracle Cloud

QUESTION 48

Which step is required before a Super Metric's data collection may begin?

- * Enable in Alerts
- * Enable in Object Types
- * Enable in Objects
- * Enable in Policy

QUESTION 49

Which two are supported Cloud Account types in vRealize Operations? (Choose two.)

- * Microsoft Azure
- * Horizon Connection Server
- * Google Cloud Platform
- * vRealize Automation
- * vCenter Server

QUESTION 50

How is Business Intent applied to objects in vRealize Operations?

- * Groups

- * Policies
- * Tags
- * Roles

QUESTION 51

Which three steps are required to enable east/west firewall in VMware Cloud Director Tenant Portal? (Choose three.)

- * Click on Data Center Group and create a new Data Center Group
- * Go to Edge Gateways and enable firewall on one of the Edge Gateways
- * Go to Networking and enable Distributed Firewall for one of the Network inside the Network section
- * Activate Distributed Firewall inside the Data Center Group
- * Login to Customer Organization and go to Networking Section of Tenant Portal
- * Enable the firewall in NSX-T

QUESTION 52

An active policy has been enabled with this alert definition:

“Virtual machine CPU usage is at 100% for an extended period of time.”

This is causing alerts to be triggered frequently by test/development VMs, so the administrator would like to exclude alerts triggered by the test/development VMs, but not other VMs.

Which action would help achieve this goal?

- * Create a policy inherited from the current active policy, set the alert definition state to “Disabled”, and then assign to test/development VMs.
- * Under Alerts, select Alerts Definitions, and then remove the Symptoms Definition.
- * On the Environment tab, select all test/development VMs, and then unassign the active policy that is currently assigned to the test/development VM.
- * Under Alerts, select Alerts Definitions, and then set the alert definition to “Disabled” for test/development VMs.

QUESTION 53

The VMware Cloud Director administrator wants to make sure that the system is able to collect log bundles from all cells at once.

How should the administrator accomplish this goal?

- * Install vRealize Log Insight agent on each cell to redirect logs to a centralized location.
- * Configure a syslog server on each of the cells, and request the logs from the syslog server.
- * Map the log location on the primary cell to a shared folder on each of the other cells in the server group, ensuring they all have read/write rights on the primary.
- * Make sure the NFS server allows read-write access to the shared location by the root system account on each cell.

QUESTION 54

An administrator discovered a problem in the virtual infrastructure and obtained instructions that would resolve the triggered alert.

Which alert component was used by the administrator?

- * Threshold
- * Symptom
- * Recommendation

* Reclamation

QUESTION 55

There is a planned project to move some workloads from a company's vSphere environment, which is running in their data center, to a public cloud. The vSphere environment is being monitored by vRealize Operations.

An administrator has been asked to get a monthly cost estimate for running the workloads in a public cloud.

What are two of the public cloud providers that are supported out-of-the-box in vRealize Operations What-If planning for public cloud costs? (Choose two.)

- * Microsoft Azure
- * Salesforce Cloud
- * Oracle Cloud
- * Alibaba Cloud
- * Google Cloud

QUESTION 56

Which two additional parameters are taken into account when sizing a vRealize Operations cluster using the sizing tool? (Choose two.)

- * Time Series Data Retention
- * Number of nodes
- * Projected Growth
- * Node size
- * Number of current users

QUESTION 57

A customer has multiple vCenter Servers in an East Coast datacenter (primary site) and one vCenter Server in each remote datacenter location (Chicago, Japan, and San Francisco).

The following information is known:

They want to monitor vCenter Server Instances in all these datacenter locations from single product UI.

Network latency between these datacenters is 50 milliseconds.

Which vRealize Operations cluster configuration is valid?

- * Deploy vRealize Operations cluster in the primary site and Data nodes in each remote site.
- * Deploy vRealize Operations cluster in the primary site and a Remote Collector node in each remote site.
- * Deploy vRealize Operations cluster in the primary site and a Witness node in each remote site.
- * Deploy vRealize Operations cluster in the primary site and a Primary Replica node in each remote site.

QUESTION 58

An administrator deployed vRealize Operations and has been tasked with ensuring that the VMware SDDC remains compliant to the VMware vSphere Security Configuration Guide. The compliance benchmark is showing that the VMware SDDC is not completely compliant to the standards.

Which three symptoms could have triggered a compliance alert? (Choose three.)

- * The lockdown mode on a vSphere ESXi host is set to Disabled.
- * Transparent Page Sharing is Disabled on a virtual machine.
- * The SNMP service on a vSphere ESXi host is set to Disabled.
- * The Enable 3D Support setting for the Virtual Machine is set to FALSE.
- * The Disable console copy operation for a Virtual Machine is set to FALSE.
- * The Forged Transmit policy is set to allow on a Distributed Port Group.

QUESTION 59

An administrator defines the role-based access control mechanisms for new vRealize Operations Manager implementation using LDAP authentication method.

Which statement accurately describes these users?

- * Credentials for these accounts are stored in its central Postgres database.
- * They are not allowed to perform any actions in vRealize Operations.
- * They can access vSphere and other objects including third-party objects.
- * The LDAP user password policy is set to expire every 45 days in vRealize Operations.

QUESTION 60

A customer is using multiple vRealize Operations (vROps) instances and has one central development vROps instance for creating dashboards. The administrator is tasked to share the newly created dashboards with other vROps instances, and the dashboards must be editable in the other instances.

Which action should the administrator take to accomplish this goal?

- * Generate a custom URL, set the expiration to `“never expire”`, and import this URL into the other instance.
- * Use the Embed option to import the HTML code into the other instances.
- * Connect the vROps instances together, and synchronize the dashboards.
- * Export the dashboard from the development instance, and import the dashboard into the other instance.

QUESTION 61

An administrator has Telegraf agent installed on a server instance.

Which type of Remote Check may be configured?

- * ICMP Check
- * UDMP Check
- * RDP Check
- * WMI Check

QUESTION 62

When Workload Planning is performed, it returns that an existing cluster does not have the capacity to accommodate the selected virtual machines.

Which alternative is offered by default?

- * Cost comparisons for running in hybrid/private/public cloud
- * Cost options for increasing cluster capacity with additional hosts
- * Modifications to virtual machine configuration

* Modifications to host configurations

VMware 5V0-35.21 certification exam is designed for professionals who are interested in acquiring the VMware vRealize Operations Specialist certification. VMware vRealize Operations Specialist certification is designed to equip IT professionals with the skills and knowledge necessary to effectively use and administer VMware vRealize Operations. VMware vRealize Operations is a powerful tool that provides comprehensive monitoring and management of virtualized IT environments.
