# 100% Reliable C_WZADM_01 Exam Dumps Test Pdf Exam Material [Q24-Q41

100% Reliable Microsoft C_WZADM_01 Exam Dumps Test Pdf Exam Material Based on Official Syllabus Topics of Actual SAP C_WZADM_01 Exam

To prepare for the SAP C_WZADM_01 certification exam, candidates can take advantage of a variety of resources, including official SAP training courses, self-study materials, and practice exams. Successful completion of the exam demonstrates a high level of proficiency in SAP Build Work Zone implementation and administration, and can open up new career opportunities for IT professionals.

SAP C_WZADM_01 Certification Exam is designed for individuals who want to demonstrate their expertise in implementing and administering SAP Build Work Zone. SAP Build Work Zone is a cloud-based platform that enables organizations to create and deploy custom applications without the need for extensive coding knowledge. Certified Application Associate - SAP Build Work Zone - Implementation and Administration certification exam is intended for professionals who have experience working with SAP Build Work Zone and want to validate their skills and knowledge in this area.

NEW QUESTION 24

In which component is the access to workspaces controlled?

*   Role collections
*   Digital Workplace Service
*   XSUAA SCIM API
*   Admin UI of the SAP BTP subaccount cockpit

NEW QUESTION 25

For a user to access an application that is deployed to SAP BTP (Cloud Foundry), what must be assigned or mapped to the user at the SAP BTP subaccount level?

*   Group
*   User list
*   Role
*   Role collection

NEW QUESTION 26

Which SAP Fiori applications does the SAP Workflow service provide for working with workflows in SAP Build Work Zone?
Note: There are 3 correct Answers to this question.

*   UI Integration Cards
*   My Inbox
*   Monitor Workflows: Workflow Definitions
*   Workflow Journey App
*   Monitor Workflows: Workflow Instances

NEW QUESTION 27

Which SAP Fiori applications does the SAP Workflow service provide for working with workflows in SAP Build Work Zone?
(Choose three.)

*   UI Integration Cards
*   My Inbox
*   Monitor Workflows: Workflow Definitions
*   Workflow Journey App
*   Monitor Workflows: Workflow Instances

The SAP Workflow service provides the following SAP Fiori applications for working with workflows in SAP Build Work Zone:

1. My Inbox

2. Monitor Workflows: Workflow Definitions

3. Monitor Workflows: Workflow Instances

Therefore, the correct answer is: B, C, E.

NEW QUESTION 28

Which of the following can be used to integrate SAP IBP with SAP Build Work Zone? Note: There are 3 correct Answers to this

question.
* UI embedding
* Guided Experience
* Content Federation
* Task Collaboration
* Content Package

NEW QUESTION 29

A user cannot login to SAP Build Work Zone.What could be a reason?
* SAP BTP subaccount viewer role collection is missing
* SAP BTP global account viewer role collection is missing
* Active default identity provider on SAP BTP subaccount level
* A shadow user does not exist on SAP BTP subaccount level
There could be several reasons why a user is unable to login to SAP Build Work Zone, but based on the options provided, the most likely reason is A. SAP BTP subaccount viewer role collection is missing.

SAP Build Work Zone is a service provided by SAP Business Technology Platform (BTP), and in order to access it, users need the appropriate roles and permissions. The SAP BTP subaccount viewer role collection is necessary for accessing SAP Build Work Zone. If this role collection is missing, the user will not be able to login.

Option B, SAP BTP global account viewer role collection, is not directly related to accessing SAP Build Work Zone and is unlikely to be the reason for login issues.

Option C, active default identity provider on SAP BTP subaccount level, may cause issues with login if it is not configured properly, but it is not directly related to missing role collections.

Option D, a shadow user not existing on SAP BTP subaccount level, is not likely to be the reason for login issues since shadow users are typically used for testing and development purposes and are not necessary for regular user access.

NEW QUESTION 30

What is the correct order of SAP Activate methodology phases?
* Deploy
* Explore
* Run
* Realize
* Prepare
The correct order of SAP Activate methodology phases is:

Prepare

Explore

Realize

Deploy

Run

So, the correct order would be:

1. Prepare

2. Explore

3. Realize

4. Deploy

5. Run

NEW QUESTION 31

Which of the following scenarios applies only to the subscription of SAP Build Work Zone but not to the service instance?
* API-based deployment of UI integration cards
* Application for users to access the solution
* API-based deployment of content packages
* Post-booster activation of SAP Cloud Identity Services (IPS)

NEW QUESTION 32

Which of the following tasks can you accomplish using SAP Build Work Zone APis? (Choose three.)
* Subscribe to events
* Granting access to single pages
* Notify gamification service
* Create new content
* Query data
I apologize, but as an AI language model, I do not have access to specific knowledge about third-party software such as SAP Build Work Zone APIs. However, based on my general understanding of APIs, I can provide some information about the typical functionalities that APIs offer.

APIs (Application Programming Interfaces) are sets of protocols, routines, and tools for building software applications. They define how different software components should interact with each other, and provide a way for developers to access specific features or data from a software platform.

Based on this general understanding, here are the possible ways in which SAP Build Work Zone APIs could be used:

1. Subscribe to events: APIs can provide event-driven architecture, where certain actions or changes trigger notifications or events that can be subscribed to by other components or services.

2. Granting access to single pages: APIs can provide authentication and authorization mechanisms that enable access control to specific resources or pages based on user roles or permissions.

3. Notify gamification service: APIs can be used to integrate with third-party services such as gamification platforms, enabling communication and data exchange between the two systems.

4. Create new content: APIs can provide functionality for creating, modifying, or deleting content on a platform, such as adding new pages or updating existing ones.

5. Query data: APIs can provide access to data stored on a platform, enabling developers to retrieve specific information or perform analytics and reporting tasks.

Based on these possible functionalities, the three tasks that can be accomplished using SAP Build Work Zone APIs could be:

6. Subscribe to events

7. Granting access to single pages

8. Create new content

NEW QUESTION 33

Which feed widget setting is used on the home page level to show all public feed updates?
* Public
* Global
* Home
* Company

NEW QUESTION 34

Which of the following functionalities are delivered as part of the HR content package? (Choose three.)
* Workspace templates
* Chatbots
* Content templates
* Guided experience
* UI Integration Cards
As an AI language model, I don’t have access to information about specific HR content packages. However, I can provide a general definition of each of the functionalities listed to help you determine which ones may be included in an HR content package:

1. Workspace templates: These are pre-designed templates for organizing and managing a workspace, such as a project management or collaboration tool. They can help streamline workflows and increase productivity.

2. Chatbots: These are computer programs designed to simulate conversation with human users, often used for customer service or support. In an HR context, they may be used to assist with onboarding, benefits enrollment, or other HR-related tasks.

3. Content templates: These are pre-designed templates for creating various types of content, such as blog posts, social media posts, or marketing materials. In an HR context, they may be used for creating job postings, employee communications, or training materials.

4. Guided experience: This refers to a user experience that is designed to guide the user through a specific process or task, providing step-by-step instructions or suggestions. In an HR context, this may be used for onboarding, performance reviews, or benefits enrollment.

5. UI Integration Cards: UI Integration Cards are small, customizable widgets that can be added to a user interface to display information or provide quick access to specific functionality. They may be used in an HR context to provide easy access to employee information, benefits enrollment, or other HR-related tasks.

Based on this information, the functionalities that may be included in an HR content package are:

6. Chatbots

7. Content templates

8. Guided experience

NEW QUESTION 35

What can you bundle using Content Packages?
* Development and content artifacts to a single deployable unit (package)
* Web content artifacts to a single deployable unit (package)
* Development and content artifacts to an archive for optimized storage

NEW QUESTION 36

Which of the following tasks can you accomplish using SAP Build Work Zone APis? Note: There are 3 correct Answers to this question.
* Subscribe to events
* Granting access to single pages
* Notify gamification service
* Create new content
* Query data

NEW QUESTION 37

Please match actions to the SCIM API user endpoints.POST /Users PATCH /Users/{id} GET /Users PUT

/Users/{id}
* Update the entire user profile
* Update specific fields of a user profile
* Create a user profile
* Return a list of user profiles

NEW QUESTION 38

Which of the following are scenarios that could be implemented with extensions for SAP Build Work Zone, advanced edition? (Choose three.)
* Ensure single-sign-on experience for all users
* Show a list of flights or hotels booked by the user in the corporate travel system
* Create a new link to corporate policies in the user menu
* Change the system logo and color scheme
* Show a list of incidents reported by a user from an on-premise or cloud system
Based on my knowledge cutoff of 2021, SAP Build has been sunsetted and replaced by SAP Fiori. However, assuming that extensions for SAP Build Work Zone, advanced edition are still available, the three scenarios that could be implemented with these extensions are:

1. Ensure single-sign-on experience for all users

2. Show a list of flights or hotels booked by the user in the corporate travel system

3. Show a list of incidents reported by a user from an on-premise or cloud system

NEW QUESTION 39

Which tool can you use to add business apps to the Applications menu?
* Work Zone Configurator
* Administration Console
* Content Manager
* Channel Manager

NEW QUESTION 40

Which IDE does SAP recommend you use to develop UI Integration Cards?
* SAP Build Apps
* Microsoft Visual Studio Code
* SAP Web IDE
* SAP Business Application Studio

SAP recommends using the SAP Business Application Studio to develop UI Integration Cards. The SAP Business Application Studio provides a comprehensive development environment for creating Fiori and SAPUI5 applications, including UI Integration Cards.

NEW QUESTION 41

Which of the following can be used to integrate SAP IBP with SAP Build Work Zone? (Choose three.)
* UI embedding
* Guided Experience
* Content Federation
* Task Collaboration
* Content Package

As an AI language model, I don’t have access to the specific technical details of SAP IBP and SAP Build Work Zone integration. However, based on the general knowledge about software integration, here are the possible answers to the given question:

The following

three options can be used to integrate SAP IBP with SAP Build Work Zone:

1. UI embedding: This option allows integrating the user interface (UI) of SAP IBP with the Build Work Zone application. This can be done by embedding UI components of SAP IBP into Build Work Zone.

2. Guided Experience: This option allows creating a step-by-step guided experience for SAP IBP users in Build Work Zone. This can help users navigate and use SAP IBP functionalities more easily.

3. Content Package: This option allows creating and sharing content packages between SAP IBP and Build Work Zone. Content packages can contain various types of content, such as reports, templates, and dashboards.
